

**Claim amendments:**

Please amend the claims as follows:

1. (Currently Amended) A standalone multifunction device comprising:
  - a modifiable user interface module configured to adapt to a plurality of business application interfaces;
  - an input device incorporating a graphical user interface;
  - a source interface module configured to receive input data from at least one document data source; [[and]]
  - a target interface module configured to output processed document data; and
  - a scriptable script engine module configured to control the operation of the standalone multifunction device and interface with a business application interface.
2. (Cancelled)
3. (Original) The standalone multifunction device of claim 1, further comprising a plurality of application integration modules configured to interface with the script engine module and provide input and output fields to the user interface module.
4. (Original) The standalone multifunction device of claim 3, wherein each of the application integration modules are further configured to interface with a specified business application.
5. (Original) The standalone multifunction device of claim 1, further comprising a user input module configured to allow a user to customize the input device.
6. (Original) The standalone multifunction device of claim 1, further comprising a scanning device configured to transmit document data to the source interface.
7. (Original) The standalone multifunction device of claim 1, further comprising a printing device configured to receive document data from the target interface.

8. (Original) The standalone multifunction device of claim 1, further comprising a communications module configured to transmit and receive data over a plurality of data communication channels.
9. (Original) The standalone multifunction device of claim 8, wherein the communications module is configured to output processed document data as a facsimile.
10. (Original) The standalone multifunction device of claim 8, wherein the communications module is configured to output processed document data as an e-mail.
11. (Original) The standalone multifunction device of claim 8, wherein the communications module is configured to output processed document data to an external device.
12. (Original) The standalone multifunction device of claim 1, wherein the input device is a touch screen apparatus.
13. (Currently Amended) A system comprising:
- a data communications network;
  - a standalone multifunction device connected to the data communications network;
  - a modifiable user interface module configured to adapt to multiple business application interfaces;
- [[an]] a scriptable script engine on the standalone multifunction device module configured to control the operation of the multifunction device, including interfacing with the business applications application interfaces;
- an input device incorporating a graphical user interface;
  - a plurality of application integration modules, configured to interface with the script engine module and provide a user interface for the business applications application interfaces;
- and
- a user input module configured to allow a user to customize the input device.

14. (Original) The system of claim 13, further comprising a facsimile apparatus configured to receive document data from the multifunction device and transmit the document data as a facsimile.

15. (Currently Amended) A computer network system comprising:

- a server connected to a network;

- a standalone multifunction device connected to the network;

- an interface module within the multifunction device, the interface module configured to communicate with a plurality of multifunction devices over the network;

- a facsimile module within the multifunction device, the facsimile module configured to send facsimiles; [[and]]

- an e-mail module within the multifunction device, the e-mail module configured to send e-mails; and

- a scriptable script engine module within the multifunction device, the scriptable script engine module configured to control the operation of the standalone multifunction device and interface with a business application interface.

16. (Original) The computer network system of claim 15, wherein the facsimile module comprises a facsimile apparatus configured to communicate with the server over a data communications network.

17. (Original) The computer network system of claim 15, wherein the e-mail module comprises an e-mail server configured to communicate with the server over a data communications network.

18. (Currently Amended) A method for multifunction device document management, the method comprising:

interfacing with a business application interface on the multifunction device, wherein the business application interface is one of a payroll application, an expense application and a human resource application;

receiving user information;

inputting document data; and

submitting document data to the business application interface.

19. (Currently Amended) A computer readable storage medium comprising computer readable code configured to carry out a process for multifunction business document management, the process comprising:

interfacing with a business application interface, wherein the business application interface is one of a payroll application, an expense application and a human resource application;

receiving user information;

inputting document data; and

submitting document data to the business application interface.

20. (Currently Amended) An apparatus for multifunction business document management, the apparatus comprising:

means for interfacing with a business application interface, wherein the business application interface is one of a payroll application, an expense application or a human resource application;

means for receiving user information;

means for inputting document data; and

means for submitting document data to the business application interface.
